PROFILE

Final-year Information Engineering student seeking an internship in Data Engineering, Data Analytics, or Business Analysis. Interested in working with databases, data analysis, and business process modeling while developing practical experience in a professional environment.

EDUCATION

Student of Information Engineering, Faculty of Technical Sciences, **2022 -**
University of Novi Sad

Currently a final-year student in Applied Information Engineering, with academic focus on programming and finance-related subjects.

PROJECTS

Database Systems Project – Event Management System (Restaurant)

Tech stack: Oracle SQL Developer Data Modeler, SQL, JDBC

Independently designed the database for an event management system in a restaurant. Created an Enhanced Entity-Relationship (EER) model and converted it into a relational schema using Oracle SQL Developer Data Modeler. Generated DDL scripts to implement the database and connected it to a Java application, where SQL queries were executed and tested using JDBC.

Machine Learning Projects

Tech stack: Python, Pandas, NumPy, TensorFlow/Keras, Matplotlib, Jupyter Notebook

A divorce prediction model was developed, including Exploratory Data Analysis (EDA) and feature engineering to improve data quality. Multiple machine learning algorithms were implemented and evaluated, such as Logistic Regression, SVM, Decision Trees, Random Forest, Gradient Boosting, AdaBoost, and kNN.

Two image classification projects (waste and sports ball classification) were implemented using image data, including data preprocessing and dataset preparation. Several deep learning models were applied and compared, including CNN, EfficientNet, RNN, CCT, and MobileNetV2 (Transfer Learning).

Tourism Agency Web Application

Tech stack: ASP.NET Core, React, SQL Server, Entity Framework

A full-stack web application simulating a travel agency platform, with features for viewing, booking, and managing trips. Implemented role-based access control using JWT tokens, supporting different user roles such as admin and customer. The project served as a learning initiative to deepen my knowledge of .Net and React.

Organizational Information System – Document Management Subsystem (In Progress)

A full-stack web application for managing documents within an organizational information system. The project includes requirement analysis, problem definition, identification of user roles and system objectives, and the design of functional requirements.

WORK EXPERIENCE

No work experience

- Motivated to acquire new knowledge and ready to work in a professional environment.
 - Dedicated and ambitious, with the ability to adapt quickly and learn new skills efficiently.
-

TECHNICAL SKILLS

- Programming Languages: Python, C#, Java
 - Familiar with: C, C++
 - Backend: Spring Boot, ASP.NET Core, JDBC
 - Frontend: React, Vue.js
 - Databases & Data Modeling: SQL, PL/SQL, Oracle, H2, EER modeling
 - Data / ML: Pandas, NumPy, TensorFlow/Keras, Matplotlib, Seaborn
 - Tools: Git, GitHub, Figma, Jupyter Notebook, Oracle SQL Developer Data Modeler
-

LANGUAGES

- Serbian
 - English
-

HOBBIES

- Painting
 - Gym
 - Travelling
